

Park San-hee

iOS & Flutter Developer

With experience in native Android and iOS app development, I currently build Flutter-based cross-platform applications.

Experience

VUNO	Flutter Mobile	Feb 2025 - Present
Hessegg	iOS Developer	Oct 2023 - Jan 2025
Studio SJ	iOS Developer	May 2022 - May 2023
Seoon Co., Ltd.	Android & iOS Developer	Mar 2021 - May 2022

Education

University	B.S. in Mobile Systems Engineering, College of International Studies, Dankook University	Mar 2016 - Aug 2020
High school	Jeonbuk National University High School, affiliated with the College of Education	Mar 2013 - Feb 2016

Training

Undergraduate Researcher	Undergraduate Researcher at the Mobile Operating Systems Laboratory, Department of Mobile Systems Engineering	Dec 2017 - Jun 2018
Machine learning education	Machine Learning Training at the University of Brno, Czech Republic	Jul 2019 - Aug 2019

Awards

Special Award	<u>UNITHON 10th Hackathon</u>	Nov 2023
Grand Prize	<u>Allen School - iOS solo Hackathon</u>	Oct 2022

Profile

Drawing on my native Android and iOS development experience, I solve mobile challenges across Flutter and native platforms. While launching and operating services at various startups, I have designed features with an understanding of server communication, data flow, and the overall application architecture.

For the WebView-based language-learning app OnStudy, I doubled downloads through App Store Optimization (ASO) and A/B testing. At Candy Camera, an app with more than 200 million cumulative downloads, I improved the legacy architecture by migrating existing UIKit screens to SwiftUI. For Pollberry, a blockchain community app, I collaborated with product managers and designers to design user flows and UI/UX and launch the service.

In a Flutter-based medical application, I collected and visualized BLE biosignals in real time and implemented background measurement, signal filtering, and data transmission through AWS IoT MQTT. I also developed a cross-platform plugin that consolidates Android and iOS BLE capabilities into a single Flutter API using Dart, Kotlin, and Swift.

I design clear boundaries between responsibilities and dependencies so that the impact of changes remains predictable as features grow, while keeping applications maintainable and extensible. I have established consistent development structures based on Clean Architecture and MVVM, and helped create reliable team collaboration through code reviews and development processes. I value a culture that improves overall engineering quality through technical discussion, not just individual implementation skills.

Technical Skills

Flutter	Dart							Riverpod	GetX
iOS	Swift	SwiftUI	FlexLayout	PinLayout	Combine				
Patterns & Architecture	Clean Architecture							MVVM	
Tools	Git	GitLab	Figma	Notion	Jira	Swagger	Postman		

Projects

VUNO

May 2025 - Jul 2026

Contribution
4 / 10

[Flutter] HATIVCARE Global

Integrated BLE ECG devices and visualized data in real time.
Implemented data-management and reporting features.
Managed network concurrency and error handling.
Managed BLE resources and prevented memory leaks.
Established an environment for app-stability monitoring and user-behavior analysis.

[Dart](#) [Flutter](#) [Riverpod](#) [MVVM](#) [Clean-Architecture](#)

VUNO

May 2026 - Jul 2026

Contribution
3 / 10

[Flutter] Teleclinic Test App

Integrated OAuth-based social sign-in.
Implemented custom-scheme-based authentication and token issuance.
Stabilized browser callback behavior.
Built a REST API test environment.

[Dart](#) [Flutter](#) [Riverpod](#) [MVVM](#) [Clean-Architecture](#)

VUNO

Nov 2025 - Mar 2026

Contribution
5 / 10

Flutter BLE Plugin Development

Developed a Flutter-based BLE integration API.
Enhanced asynchronous streams in iOS CoreBluetooth.
Implemented real-time BLE protocol and session control.
Built real-time data-stream processing.

[Swift](#) [Dart](#) [Flutter](#) [Bluetooth](#) [Flutter Plugin](#)

VUNO

Aug 2025 - Nov 2025

Contribution
3 / 10

[Flutter, Android Only] CVMS (Continuous Vital Monitoring System)

Collected and visualized multichannel biosignals in real time.
Implemented background measurement and data uploads.
Applied channel-specific real-time noise filtering and rendering.
Built real-time IoT cloud streaming.
Designed an asynchronous communication architecture between isolates.

[GetX](#) [Dart](#) [Flutter](#) [Bluetooth](#) [MQTT](#)

Projects

Hessegg

Aug 2024 - Jan 2025

Contribution
7 / 10

[iOS] Donation Pledge Platform

Designed and implemented the new service architecture.
Built a range of custom SwiftUI UI components.
Implemented the Coordinator pattern using NavigationView.
Led iOS development.

Swift SwiftUI UIKit MVVM-C Combine SPM Clean-Architecture Unit Test

Hessegg

Oct 2023 - Jul 2024

Contribution
3 / 10

[iOS] Pollberry

Designed and implemented the new service architecture.
Integrated third-party banner and video ads, implemented abuse-prevention measures, and built an ad-reward processing system.
Implemented a vertically scrolling short-form video feed.
Integrated deep links using the Kakao Share SDK.
Implemented FCM push notifications and deep-link handling.
Optimized image caching with Kingfisher.
Implemented secure data storage through encryption and decryption of sensitive information.
Managed App Store releases and updates.

Swift SwiftUI UIKit MVVM-C Combine

Hessegg

Feb 2024 - Apr 2024

Contribution
2 / 10

[iOS] Klaatoo

Implemented Tron transactions.
Implemented mnemonic encryption and decryption.
Implemented Bitcoin address derivation logic.

Swift SwiftUI Combine SPM

Studio SJ

May 2022 - May 2023

Contribution
2 / 10

[iOS] Candy Plus

Designed and implemented new features using Swift and SwiftUI.
Developed a bridge module between Objective-C code and Swift functions.
Migrated legacy components from Objective-C to Swift and from UIKit to SwiftUI.
Developed NFT and blockchain services.
Implemented FCM notification deep-link handling and a notification history screen.
Developed localization features for multinational services.
Managed App Store updates and review rejections.

Swift SwiftUI UIKit Objective-C MVVM-C Combine SPM CocoaPods

Projects

Apr 2021 - May 2022	Seoon Co., Ltd.	[Android] Onstudy App Series
Contribution 3 / 10		Implemented data synchronization between local and server databases to support offline and multi-device environments. Implemented SQLite3 local-database schema upgrades and existing-user data migration. Developed audio playback features using MediaPlayer. Migrated code from Java to Kotlin.
		Kotlin Java SQLite3 Firebase
Mar 2021 - Aug 2021	Seoon Co., Ltd.	[Backend] Onstudy
Contribution 5 / 10		Implemented server-side validation for iOS in-app purchases. Developed refund handling and subscription-renewal features for iOS in-app purchases. Designed and built the database.
		Spring Boot Java MySQL
Jul 2021 - Dec 2021	Seoon Co., Ltd.	[Frontend] Onstudy WebView
Contribution 6 / 10		Designed and implemented HTML and JavaScript for WebView-based applications. Developed scripts that generate dynamic HTML pages using database data. Developed a JavaScript communication module that interacts with native iOS functionality.
		javascript node.js
Sep 2021 - May 2022	Seoon Co., Ltd.	[iOS] Onstudy
Contribution 5 / 10		Developed the app using Swift and SwiftUI. Implemented bidirectional communication through WebView. Implemented in-app purchase features using SwiftyStoreKit. Implemented data synchronization for offline use. Migrated the local database.
		Swift SwiftUI MVVM-C UIKit
